Methods of linking functional information with fossil pollen

Was Bayesian modelling used to link functional traits and pollen?

Was a specialized linking table used to link functional traits and pollen?

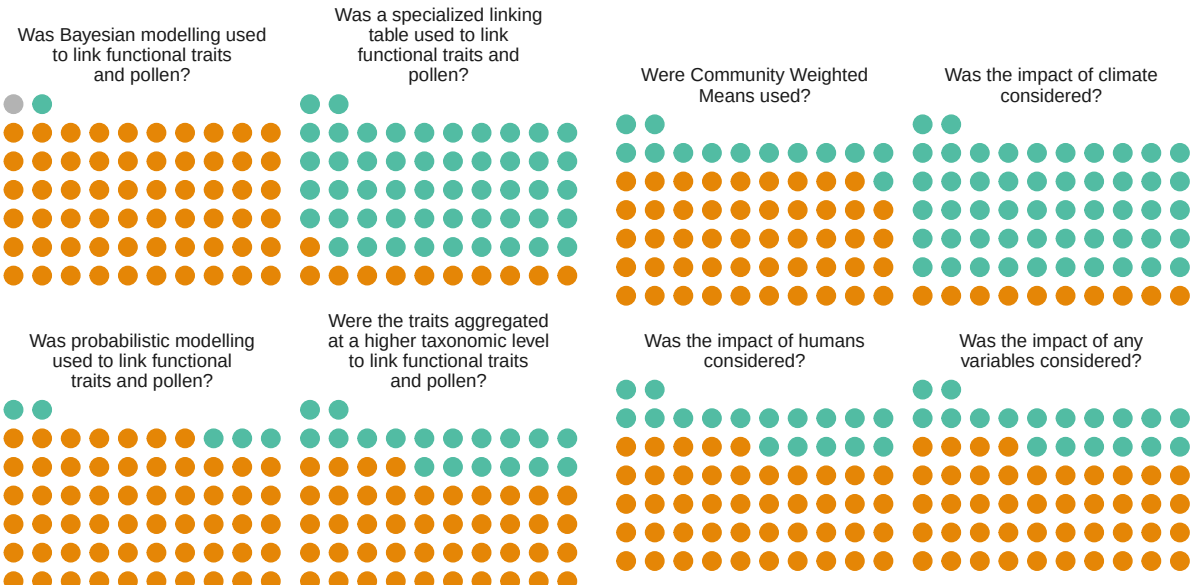
Was probabilistic modelling used to link functional traits and pollen?

Were the traits aggregated at a higher taxonomic level to link functional traits and pollen?

Processing of the combined trait−pollen data and incorporation of variables

Were Community Weighted Means used?

Was the impact of climate considered?

Was the impact of humans considered?


Was the impact of any variables considered?
